

Custom Website Development

Gene Byte provides professional Website Design, Development and Maintenance Services. Our skilled Web Designers and Developers accomplish various website projects from brochure sites to multi-functional web portals. Gene Byte has a large pool of resources and the required business and technical expertise to develop websites of any complexity. We provide complete front-end and back-end development based on the latest technologies and industry trends.

Our key Focus is

- Professional Design
- Comprehensive Functionality
- Expert Back-End Programming

Gene Byte Advantage

- **Clear Communication**

We believe effective communication is the key to successful deliveries. Effective communication is vital for success of any project. We at once establish a two-way knowledge transfer process that would let us, firstly, clearly understand client requirements, and secondly, provide a sound and transparent advice on technology and solution options. From the very beginning of development every project has a project manager involved. The client is able to solve all project related issues through a single point of contact at Gene Byte . We use different communication means: E-mail, Phone, Instant Messengers, Skype, as well as onsite visits, to secure the required level of communication.

- **Efficient Process**

We have derived our development methodology from the best industry practices like Agile methodology. We follow a practical approach to development process. We know when to apply a “light-weight” approach for a small project to get the optimal cost-time balance. We also know how and are able to expand it for a complex development project. But regardless of the applied process model all projects go through stringent quality verification procedures.

- Right Solution

By utilizing our extensive cross-domain expertise and technology competence we deliver the right solutions for specific situations. Prior to project implementation our analysts study your business requirements thoroughly. The detailed analysis allows us to define the appropriate approach, design consistent architecture and select the right tools and technologies taking into account the current needs and laying foundation for future growth.

- High Quality

A dedicated Quality Assurance Department is responsible for quality monitoring and testing at all stages of website development to ensure high quality of the final product. Verification includes various aspects of entire project including GUI testing and HTML standards compliance, Functionality-to-requirements Conformity, Error-free Coding, Performance and Stability Testing.

Our suite of Web Development Services includes:

- [CMS Development](#)
- [Web Portal Development](#)
- [Web Graphics](#)
