

In the knowledge-intensive economy of today, portals become integrated "anytime-anywhere access" platforms for information delivery.

Gene Byte offers full cycle Portal Development services for information delivery, communication, collaboration and automation of business processes through interconnected applications and web services. We work closely with our clients to first identify business objectives, define a solution strategy and develop a detailed roadmap for Portal Implementation. Based on the roadmap and architecture developed during the assessment and specification stage we deliver custom-built solutions with comprehensive business logic, efficient performance and business and technical scalability.

Corporate around the world are using portal development services for help in managing sales activities, marketing programs, and enhancing support and service functions. A good portal involves an appropriate integration of design and content in conjunction with other services offered to the user. Gene Byte offers portal development services to help Clients Avenue for building customer loyalty.
